SUMMARY

Final-year Computer Science undergraduate (CGPA 9.54/10.0) with four Data Science internships spanning production ML pipelines, REST APIs, deep learning, SQL automation, and statistical modeling. Delivered measurable business impact — 156+ hours saved annually, 12% F1-score improvement, 15% faster deployment cycles. Proficient in Python, SQL, Scikit-learn, TensorFlow, and Flask, with HackerRank Advanced SQL certification. Seeking a Software Engineering, Data Science, or Applied Sciences internship building and shipping ML-driven, production-scale systems.

EXPERIENCE

Data Science Intern | Xylofy AI

Jun 2026 – Jul 2026

- **Retail Demand Forecasting:** Built a demand forecasting and anomaly detection system on historical retail transaction data; developed a time-series model with confidence intervals and flagged revenue anomalies to distinguish market shocks from operational issues.
- **Inventory & ML Workflow:** Segmented products by revenue impact and demand stability to guide inventory strategy, applying machine learning techniques across the data science workflow and delivering an interactive Flask dashboard for stakeholders.

Data Science Intern | GRRAS Solutions

Mar 2026 – May 2026

- **Deep Learning:** Developed and evaluated deep learning models for classification tasks, applying neural network architectures to improve prediction accuracy on structured datasets.
- **REST API Integration:** Designed and integrated REST APIs to serve machine learning model predictions, enabling downstream applications to consume model outputs programmatically.

Data Science & Analytics Intern Mentor | LinuxWorld Informatics

Jun 2025 – Aug 2025

- **Process Automation & Efficiency:** Saved 156+ manual reporting hours annually (~3 hrs/week) by designing and automating 8 optimized PostgreSQL query pipelines in Python, eliminating ad-hoc data requests across 2 cross-functional teams.
- **Data-Driven Performance:** Improved model decision performance and classification F1-score by 12% by implementing statistical sampling and SMOTE-based class-imbalance correction on 50K+ production records.

PROJECTS

Employee Attrition Prediction · Python · Scikit-learn · XGBoost · SMOTE · Seaborn

- Built an end-to-end attrition prediction pipeline on IBM HR Analytics data (1,470 records); engineered features via one-hot encoding, addressed class imbalance with SMOTE, then trained and compared Logistic Regression, Random Forest, and XGBoost classifiers optimized for Recall and F1-score to minimize missed at-risk employees.
- Surfaced key HR insights — overtime and low income as top attrition drivers — through rigorous EDA; packaged findings into a structured business report for HR leadership.

Neural Machine Translation Tool · TensorFlow · Keras · Transformers · Flask

- Designed and trained a Transformer-based NMT system supporting English↔Spanish and English↔French translation; implemented self-attention layers, custom tokenization/vectorization pipelines, and sequence padding to optimize inference efficiency.
- Deployed the trained model as a Flask web app with a GUI front-end, demonstrating full-cycle ML productionization from research to live endpoint.

Mood Beats — Mood-Based Music Recommender · Scikit-learn · joblib · Flask · React · Vite · Vercel

- Trained and serialized (joblib) a mood-classification model mapping user text input to mood categories and recommending matching tracks; served predictions via a Flask REST API.
- Built a React/Vite front-end consuming the API and deployed the full stack to Vercel — the only project demonstrating end-to-end ML deployment from trained model to live public UI.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript (basic)

ML / Deep Learning: Scikit-learn, TensorFlow, Keras, XGBoost, SMOTE, Neural Networks, Transformer & self-attention architectures

Data & Analytics: Pandas, NumPy, Matplotlib, Seaborn, Power BI, Excel, SQL (PostgreSQL), Time-Series Forecasting

Deployment & Tools: Flask, REST APIs, React, Vite, Vercel, joblib, Git, GitHub

EDUCATION

B.Tech — Computer Science & Engineering

Aug 2023 – May 2027 (expected)

Rajasthan Technical University, Kota, India — CGPA: 9.54 / 10.0 (through Semester 6)

CERTIFICATIONS

- Advanced SQL Certification — HackerRank | 2026
- Google Analytics Certification — Google (Credential ID: 154268923) | July 2026
- Data Analytics Job Simulation — Deloitte | 2026
- Data Science & DSA Certification — Learn and Build (LnB) | 2025

ACHIEVEMENTS & LEADERSHIP

- Core Member, Placement Cell, Jaipur Engineering College — coordinates cross-functional recruitment events and manages recruiter relations for the student body.
- 2nd Rank, 1st Year B.Tech (out of 150 students); recipient of the Ananya Award for academic distinction.
